ABSTRACT

A ceramic slurry composition includes 20~50wt.% of a ceramic powder, 2~10wt.% of a polymer having weight-an average molecular weight of 400,000 or more, 0.1~2wt.% of a polymer having hydrogen bond-forming functional groups, and 40~75wt.% of a solvent. If necessary, the ceramic slurry composition further includes 1~5wt.% of a polymer having weight an average molecular weight of 400,000 or less.
